DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 11, drawn to an electro-optical device having an identification pattern to identify the scanning lines formed in the dummy pixel area, classified in class 349, subclass 43.
- II. Claim 10, drawn to a method of manufacturing an electro-optical panel including forming a gate insulating film on a semiconductor layer, classified in class 438, subclass 38.

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the device of invention I can be formed using a different method such as one which forms a bottom gate transistor instead of the top gate transistor formed by the method of invention II.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2871
